The public is welcome to participate in the conference through an audio webcast. To do so, please visit <http://www.ubswarburg.com> and click on the UBS Warburg conference link found on the lower right side of the page. Follow the link for Live Audio under the Global Life Sciences Conference heading. The presentation will be available live and by replay. The replay will begin three hours after the presentation time and will be available until November 10, 2002.

### **About TransForm**

TransForm is reinventing the pharmaceutical industry's approach to form and formulation, with a novel set of high-throughput, automated platform technologies powered by state-of-the-art informatics and a scientific and managerial team with deep experience in pharmaceuticals. It uses these capabilities to optimize drug form and/or formulations, and increase the clinical and commercial value of pharmaceutical products, across the entire pharmaceutical value chain. In R&D, TransForm is working with partners such as Alza Corporation and Lilly, to help them make better candidate selection decisions, and reduces attrition and development time and cost. For later stage and marketed products, TransForm can help partners enhance product life cycle management by rapidly discovering novel forms and/or formulations to potentially improve bioavailability, broaden intellectual property protection and enable new dosage forms and/or combination products.

TransForm is also using these capabilities to develop its own proprietary product portfolio. TransForm, founded in late 1999 with initial technology from Millennium Pharmaceuticals (NASDAQ:MLNM), is a privately held company located in Lexington, MA.
